

A structured cable entry is one of the most important conditionals for reliability of operation and energy efficient use of active and passive network components. Especially for 19" levels, a high number of cables often is a reason for unmanageable and interwoven cable strings, which reduces the air circulation. The flexible 19" cable manager by apraNET bring structure and transparency into your cabling.

## product attribute

- structured, horizontal cable entry in the 19" level
- stable plastic cable fingers for front side
- lockable by hinged covers from front side (in both directions)
- there is no impairment of air duct in the cabinet
- extended reliability of operation
- better overview in the cabinet
- flexible applicability in each 19" cabinet and box systems

## Material:

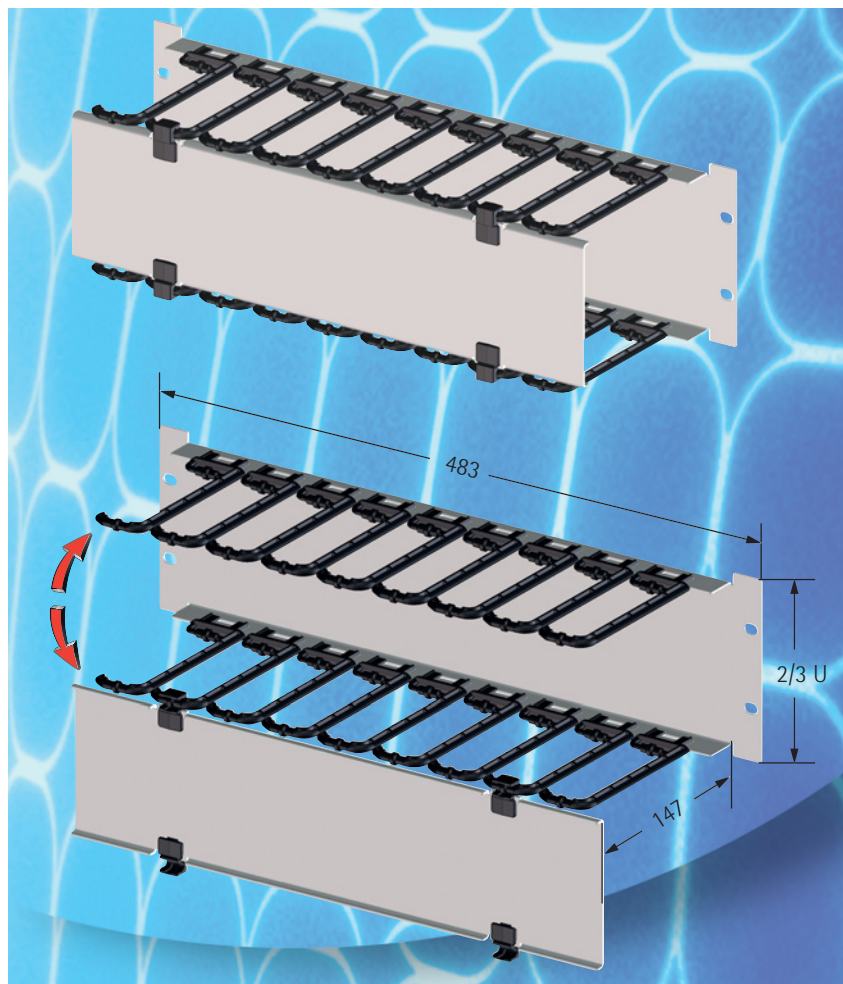

flange: steel panel  
hinged cover: aluminum sheet  
cable fingers and hinges:  
plastic (UL94 – V0), black

## Finish:

panel sheet: powder-coated in  
RAL 7035 light grey or in RAL 9005 dark black

## Scope of delivery:

1 piece, incl. 19" mounting set  
(flange / cable fingers / hinged cover)
