

Cabinet solutions without compromises in installation and assembly requirements

TIRAX

Fully symmetrical rack construction

All doors or side panels can be mounted on every side of the rack (e.g.: doors can be hinged laterally).

Protection class up to IP 55

The rack system is suited for industrial applications and optimized for cooling requirements.

Modern design

The two-colour design adds a new and fresh look to your datacenter or industrial environment. By changing the colour of the design profiles, each cabinet can have its own characteristic and functionality.

Modular rack construction

Cable entry and ventilation can be done from top or bottom of the rack as well as from all sides due to "modular technique".

Modular interior structure

The symmetrical inner construction of the rack allows for flexible mounting of e.g. cable retainer bars, multi-functional assembly bars and other accessories.

Flexible rack sizes

The cabinet height starts at 1200 mm (24 U) and reaches up to 2200 mm (48 U). The depth starts at 600 mm (patch cabinet) over 800 mm (LAN cabinet) up to 1200 mm (server cabinet). In terms of cabinet width, the two standard dimensions 600/800 are offered.

Easy assembly saves time and money

We ship the racks pre-assembled exactly according to individual specifications. No more wasting your time with complex rack assembly or installation of different components or accessories – the TIRAX racks are ready to use as delivered. Furthermore, if necessary, the rack can be disassembled completely. On-site installation service is possible on request.

Stability and electric connectivity

The specially designed, rolled and laser welded frame construction made of galvanised sheet metal guarantees high sturdiness of the frame. For the protection of built-in components, all frame parts are electrically connected to each other.

Whether it's about **cabinet solutions**, **air conditioning**, **power distribution** or **cable management**: we're your competent and reliable partner – from **planning and design** to **installation** and up to the **after-sales service**.
